## 1. General Information

**Plan Report ID Number** : 20231130acu

**Developer Name** : Acurus Solutions, Inc.

**Product Name(s)** : Capella EHR

**Version Number(s)** : 6.1

**Certified Health IT** : 2015 Cures Update | 15.02.05.2669.ACUR.01.01.1.220131

**Product List CHPL ID** : 15.02.05.2669.ACUR.01.01.1.220131

**Developer Real World Test Page URL** : <https://rwt.acurussolutions.com/Capella/>

## 2. Justification for Real World Testing approach

Capella EHR software is used by providers in various specialties in outpatient clinics. The workflow and functionality needed in all of the clinics is the same. Therefore, the Real World Testing plan will apply to the outpatient clinic setting for all specialty clinics. Since the EHR has functionality falling under the categories: Care Coordination, Clinical Quality Measures, Patient Engagement, Electronic Exchange, Public Health, and Application Programming Interfaces (API), all associated criteria listed in the following section will be tested. The certification criteria can be tested simultaneously in some cases therefore we bundled criteria in our testing approach. Our quantitative approach captures measurements of each bundle which demonstrate functional usage. The usage of the software is similar throughout the year; therefore, for the Real World Testing plan, we will collect data over a representative period of time in 2024.

## 3. Standards Updates

(INCLUDING STANDARDS VERSION ADVANCEMENT PROCESS (SVAP) AND UNITED STATES CORE DATA FOR INTEROPERABILITY (USCDI))

| Standard (and version)                                | United States Core Data for Interoperability (USCDI), Version 1, July 2020 Errata                                                                                                                                                                                                                                                                                                                                |

| <b>Standards Updates</b>                                    | see Standards Updates section above                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Description of the measure</b>                           | <p>Capella EHR logs will be reviewed and analyzed to test the usage and frequency of events related to interoperability and care coordination. The following metrics will be collected:</p> <ul style="list-style-type: none"> <li>• # of patients for whom the Care notes/CCD were generated</li> <li>• # of users who exported CCD or care notes</li> <li>• # of mails sent</li> <li>• # of mails received</li> <li>• # of documents imported</li> <li>• # of CCDs extracted to human readable format</li> <li>• # of CCDs reconciled</li> </ul> |

|                                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|-------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Justification of the measure</b> | <p>The Interoperability measure helps the providers to electronically transmit and receive the structured and unstructured patient information using secured interfaces. This allows the provider to view and reconcile the patient data from an external source successfully.</p> <p>The metrics above will provide frequency of usage to demonstrate the interoperability functionality.</p>                                                                                                                         |
| <b>Expected outcomes</b>            | <ol style="list-style-type: none"> <li>1. Providers will successfully be able to electronically transmit (send and receive) patient health information to external third-party service providers in a secured manner and in accordance with the standards specified and there will be less than 1% of errors in the electronic transmission</li> <li>2. Providers will be able to reconcile data received from the external source with the pre-existing data and display the data as human readable format</li> </ol> |

| <b>Standards Updates</b>                 | see Standards Updates section above                                                                                                                                                                                                                                                                                                                             |
| <b>Description of the measure</b>        | Capella EHR tracks the activities performed by the patients in the patient portal using the following measurements <ul style="list-style-type: none"> <li>• # of patients enrolled for portal</li> <li>• # of patients accessing patient portal</li> <li>• # of documents viewed/added/downloaded</li> <li>• # of patient communications from portal</li> </ul> |
| <b>Justification of the measure</b>      | The metrics selected provides usage information and the functionality of the patient portal to allow patients access to his/her medical data, capability to upload relevant documents and communicate with providers through the portal.                                                                                                                        |
| <b>Expected outcomes</b>                 | 1. Patients can view, access and handle their health information successfully in a secured manner.<br>2. Patients can securely communicate with the providers using the portal.<br>3. It is expected most patients will access their record and download their medical records if required and tracked                                                          |

| Clinical Quality Measures                |                                                                                                                                                                                                                                                                                                                         |

| <b>Description of the measure</b>   | Clinical quality measure reporting for 9 CQM measures for a quarter in year 2024                                                                                                                                                                                                                              |
| <b>Justification of the measure</b> | Capella EHR helps our providers to improve their quality of service and enhance the payments using various quality initiatives obtained based on the analysis of the above measures. The clinical quality measure reporting shows the capability of recording and exporting data related to quality measures. |
| <b>Expected outcomes</b>            | <ol style="list-style-type: none"> <li>1. Successful exports of QRDA III for the reporting period are tracked and measured</li> <li>2. Successful imports of QRDA III and aggregation in the eCQM report are tracked and measured</li> </ol>                                                                  |

| <b>Description of the measure</b>        | CURES patient activity                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Justification of the measure</b>      | Per CURES, providers are required to review / report Schedules II-V controlled substances prescription prescribed to the patient. We have initiated this feature with the help of Rcopia 4 which will help our providers to monitor the prescription of the controlled substances in real time without the need to navigate out of Capella EHR. The CURES patient activity should demonstrate the capability for collecting the required data and reporting to CURES. |
| <b>Expected outcomes</b>                 | Successful real time monitoring of the prescription of Schedules II-V controlled substances from within Capella EHR are tracked and measured                                                                                                                                                                                                                                                                                                                          |

| <b>Standards Updates</b>                 | None                                                                                                                                                                                                                                                                        |
| <b>Description of the measure</b>        | Capella EHR tracks the submissions done to CAIR and logs the following: <ul style="list-style-type: none"> <li>• # of patients for which Immunization registries are done</li> <li>• # of patients for which CAIR report is submitted</li> </ul>                            |
| <b>Justification of the measure</b>      | The system helps the care providers to store and access the immunizations history for all patients and successful report to immunization registries[CAIR] in the HL7 format. The selected metric shows the functionality of capturing immunization data and CAIR reporting. |
| <b>Expected outcomes</b>                 | Successful transmissions of Immunization HL7 messages with quantification of error rates.<br><br>We track the errors post electronic submissions to California Immunization Registries.                                                                                     |

| <b>Public Health-Syndromic Surveillance</b> |                                                                                                                                                                                                                                                                        |
|---------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Description of system usage</b>          | 1. Ability to generate the Syndromic Surveillance message for the selected patient, using HL7 format for <ol style="list-style-type: none"> <li>1.1. | <b>Justification of the measure</b>       | <ol style="list-style-type: none"> <li>1. Capella EHR facilitates external bodies and other health organisations to electronically request for patient health data using APIs in a secured manner</li> <li>2. The number of API requests received and executed will show the use of the API over time.</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>Expected outcomes</b>                  | We will be tracking API requests based on third party utilization                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

## 6. Care Setting

Multispecialty Outpatient Clinics – Our certified product Capella EHR is specifically designed and certified for Ambulatory setting which can be utilized similarly in various specialties. Therefore, we conduct the Real World Testing in the multispecialty outpatient setting.

## 7. Schedule of Key Milestones

|                                                                            |                 |
|----------------------------------------------------------------------------|-----------------|
| Collection of data as laid out in the above Real World Testing plan        | 01-April-2024   |
| End of Real-World Testing period/final collection of all data for analysis | 30-Sep-2024     |
| Result submission to ONC ACB                                               | 15-January-2025 |

## 8. Attestation

This Real World Testing plan is complete with all required elements, including measures that address all certification criteria and care settings. All information in this plan is up to date and fully addresses the health IT developer's Real World Testing requirements.
